SAJI feature evidence matrix

9 October 2026. Source inspection at commit 3ad9644eedcb1749550ef55a87bb4565af6e636f plus existing local POS changes. This is a code inventory, not end-to-end acceptance testing. No feature is certified fully verified.

Final categories: verified; implemented awaiting testing; partial; demonstration/mock; absent; blocked/nonfunctional. Current rows are provisional; module presence alone does not establish implementation completeness.

Feature	Evidence	Provisional finding	Next verification
Authentication	auth.ts, app/api/auth/	Implementation inspected, awaiting testing	Credentials/OAuth, recovery, sessions and account states
Role portals	app/customer/, app/(pro)/ and staff/agent/distributor routes	Routes present; workflows unclassified	Cross-role isolation and complete navigation
Jobs/orders	lib/actions/jobs.ts, orders.ts	Server operations and Prisma reads inspected; completeness unclassified	Create, accept, fulfil, cancel, persistence and ownership
Location discovery	lib/geo-sql.ts, scripts/enable-postgis.js	Query implementation present; live extension/indexes unverified	Read-only DB inventory and controlled radius cases
Messaging	lib/hooks/useConversationMessages.ts, actions/messages.ts	Five-second polling path present, awaiting testing	Two-user delivery and participant isolation
Calls	lib/hooks/useVoiceCall.ts, actions/calls.ts	Partial infrastructure: WebRTC and signaling present, STUN-only	Cross-network audio, relay support and reconnect
Wallet/escrow	lib/wallet-core.ts, payment-core.ts, settlement-core.ts	Modules present; correctness unclassified	Ledger balance, idempotency, refunds and concurrent settlement
M-Pesa	lib/actions/payments.ts, callback routes	Integration code; missing credentials simulates completion	Sandbox callbacks, reconciliation and production setup
Stripe/PayPal	payments actions and callbacks	Paths present; live availability unverified	Sandbox payments, validation and failure/refund cases
Airtel	.env.example and callback path	Sample explicitly says not implemented	Review actual response; disable unavailable option
Bank transfer	.env.example, secretary payments	Documented manual reconciliation	Staff permissions and deposit audit trail
POS/inventory	provider/till/, pos-sales.ts, pos-stock.ts	DB operations present; local changes uncommitted	Sales/returns, stock, offline sync and schema alignment
KYC/access gates	verification-gate.ts, kyc-review-core.ts	Modules present; coverage unclassified	Sensitive-operation gate coverage and document isolation
AI	lib/ai/credentials.ts, chatbot.ts	Provider/fallback and unconfigured paths present	Real calls, quotas, privacy and simulation disclosure
Email/SMS/push	lib/email.ts, sms.ts, push.ts	Modules/configuration present; delivery unverified	Actual delivery, recovery/OTP limits and unsubscribe
Reporting/staff	Role routes and matching actions	Files present; workflow status unclassified	Financial reconciliation, exports and staff permissions
Health/monitoring	app/api/health/route.ts, Sentry config	SELECT 1 health check inspected; monitoring configured	Deployed health response and alert/event receipt
Cron	vercel.json, app/api/cron/	Three schedules declared; scheduler unverified	Actual executions and token enforcement
Self-host deployment	next.config.mjs, prepare-standalone.js	Partial: standalone configured, postbuild helper empty	Reproducible packaging, assets, Prisma engine and startup

A completion percentage and development quotation require staging acceptance workflows, recorded failures, authorization

review and estimates of remaining work. Source counts cannot supply them.

Future architecture requirement: separate saji-frontend and saji-backend repositories communicating through versioned APIs. This extraction is planned, not implemented; each migrated feature requires contract, authorization and independent deployment verification. See the architecture document for the migration sequence.
